

EaseUS Todo PCTrans Professional 10.0 Build 20181229 Key is a system backup and migration software which migrates Windows OS, applications, settings and personal data from a computer to a new drive or a different computer in bare metal environment. It can be used to transfer Windows OS with applications, settings and personal data from the old hard drive to the new hard drive in one operation. This way you don't need to reinstall everything on your new device or worry about disk space. To start a backup from an existing computer, you can choose "Computer Backup" from the main window of the software. In this way you'll be prompted to choose a source or target computer. In both cases, the system backup is performed in a few simple clicks. In addition, it can be used to migrate Windows operating systems and important data from old hard drive to a new hard drive. It uses a bare-metal migration technology which will do all operations on an empty hard drive with no applications or data installed on it, thereby providing greater data security and reliability than any other migration program. This way you don't need to reinstall everything on your new device or worry about disk space. In addition, it supports a variety of Windows OS including Windows XP/2003/Vista/7, 32 bit and 64 bit operating systems, which means you can uninstall a software installed on your computer and install a new one without reinstalling the OS again. It runs from a USB flash drive or CD-ROM. In addition, this tool also allows you to transfer your data from one partition to another without reinstalling the system, which will save you a lot of time and energy. Moreover, it can transfer the whole system (OS+applications) in one operation without reinstalling everything in bare metal environment. Thus it is more convenient than Windows Move System in use in computer shops. Finally, it can transfer Windows OS with applications, settings and personal data from the old hard drive to the new hard drive in one operation. It also provides an option to save all data on the old hard drive to an external device or network for backup.
